

INTRODUCTION:-

A concise technical overview comparing compilers and interpreters: how they transform source code into executable behavior, design trade-offs, and practical implications for language implementation and program performance.

```
1 // Compiler X: A Simple Example
2 #include <iostream>
3 using namespace std;
4
5 int main() {
6     cout << "Hello, World!" << endl;
7     return 0;
8 }
9
10 // Compiler Y: A More Complex Example
11 #include <iostream>
12 using namespace std;
13
14 int main() {
15     cout << "Hello, World!" << endl;
16     return 0;
17 }
18
19 // Compiler Z: A More Complex Example
20 #include <iostream>
21 using namespace std;
22
23 int main() {
24     cout << "Hello, World!" << endl;
25     return 0;
26 }
27
28 // Compiler W: A More Complex Example
29 #include <iostream>
30 using namespace std;
31
32 int main() {
33     cout << "Hello, World!" << endl;
34     return 0;
35 }
36
37 // Compiler V: A More Complex Example
38 #include <iostream>
39 using namespace std;
40
41 int main() {
42     cout << "Hello, World!" << endl;
43     return 0;
44 }
45
46 // Compiler U: A More Complex Example
47 #include <iostream>
48 using namespace std;
49
50 int main() {
51     cout << "Hello, World!" << endl;
52     return 0;
53 }
54
55 // Compiler T: A More Complex Example
56 #include <iostream>
57 using namespace std;
58
59 int main() {
60     cout << "Hello, World!" << endl;
61     return 0;
62 }
63
64 // Compiler S: A More Complex Example
65 #include <iostream>
66 using namespace std;
67
68 int main() {
69     cout << "Hello, World!" << endl;
70     return 0;
71 }
72
73 // Compiler R: A More Complex Example
74 #include <iostream>
75 using namespace std;
76
77 int main() {
78     cout << "Hello, World!" << endl;
79     return 0;
80 }
81
82 // Compiler Q: A More Complex Example
83 #include <iostream>
84 using namespace std;
85
86 int main() {
87     cout << "Hello, World!" << endl;
88     return 0;
89 }
90
91 // Compiler P: A More Complex Example
92 #include <iostream>
93 using namespace std;
94
95 int main() {
96     cout << "Hello, World!" << endl;
97     return 0;
98 }
99
100 // Compiler O: A More Complex Example
101 #include <iostream>
102 using namespace std;
103
104 int main() {
105     cout << "Hello, World!" << endl;
106     return 0;
107 }
108
109 // Compiler N: A More Complex Example
110 #include <iostream>
111 using namespace std;
112
113 int main() {
114     cout << "Hello, World!" << endl;
115     return 0;
116 }
117
118 // Compiler M: A More Complex Example
119 #include <iostream>
120 using namespace std;
121
122 int main() {
123     cout << "Hello, World!" << endl;
124     return 0;
125 }
126
127 // Compiler L: A More Complex Example
128 #include <iostream>
129 using namespace std;
130
131 int main() {
132     cout << "Hello, World!" << endl;
133     return 0;
134 }
135
136 // Compiler K: A More Complex Example
137 #include <iostream>
138 using namespace std;
139
140 int main() {
141     cout << "Hello, World!" << endl;
142     return 0;
143 }
144
145 // Compiler J: A More Complex Example
146 #include <iostream>
147 using namespace std;
148
149 int main() {
150     cout << "Hello, World!" << endl;
151     return 0;
152 }
153
154 // Compiler I: A More Complex Example
155 #include <iostream>
156 using namespace std;
157
158 int main() {
159     cout << "Hello, World!" << endl;
160     return 0;
161 }
162
163 // Compiler H: A More Complex Example
164 #include <iostream>
165 using namespace std;
166
167 int main() {
168     cout << "Hello, World!" << endl;
169     return 0;
170 }
171
172 // Compiler G: A More Complex Example
173 #include <iostream>
174 using namespace std;
175
176 int main() {
177     cout << "Hello, World!" << endl;
178     return 0;
179 }
180
181 // Compiler F: A More Complex Example
182 #include <iostream>
183 using namespace std;
184
185 int main() {
186     cout << "Hello, World!" << endl;
187     return 0;
188 }
189
190 // Compiler E: A More Complex Example
191 #include <iostream>
192 using namespace std;
193
194 int main() {
195     cout << "Hello, World!" << endl;
196     return 0;
197 }
198
199 // Compiler D: A More Complex Example
200 #include <iostream>
201 using namespace std;
202
203 int main() {
204     cout << "Hello, World!" << endl;
205     return 0;
206 }
207
208 // Compiler C: A More Complex Example
209 #include <iostream>
210 using namespace std;
211
212 int main() {
213     cout << "Hello, World!" << endl;
214     return 0;
215 }
216
217 // Compiler B: A More Complex Example
218 #include <iostream>
219 using namespace std;
220
221 int main() {
222     cout << "Hello, World!" << endl;
223     return 0;
224 }
225
226 // Compiler A: A More Complex Example
227 #include <iostream>
228 using namespace std;
229
230 int main() {
231     cout << "Hello, World!" << endl;
232     return 0;
233 }
